

SNOWMAKING PRODUCTS MATRIX

Snowmaker	Distribution	Application	Description
 SV10 Impulse		<ul style="list-style-type: none"> • Wide Trail • Narrow Trail • Steep Trail • Terrain Park • Base Area • Real Estate Access 	<p>The BRAND NEW "HKD SV10 Impulse" marks yet another milestone in the development of HKD Low-E Technology. The Impulse's unique design incorporates Snow Economics' dynamic Low-E air control technology (patent pending). The "Impulse" gives the snowmaker the ability to manage snowgun performance at all temperatures by adjusting air AND water flows, simultaneously. The Impulse is essentially two low-e tower snowguns in one. In the high temp mode, the "Impulse" uses a little more compressed air to cover your most critical, early opening terrain under marginal snowmaking conditions. As temperatures fall, the "Impulse" is capable of shifting gears (while operating) to its outrageously efficient, low airflow, low-energy consumption mode. The revolutionary air flow adjustment capability of the Impulse allows for snowmaking performance and efficiencies unattainable by competing products.</p>
 SV10201		<ul style="list-style-type: none"> • Wide Trail • Narrow Trail • Steep Trail • Terrain Park • Base Area • Real Estate Access • On-Board Compressor 	<p>The SV10201 is a time tested, proven performer. It is capable of low flow, high temperature performance with a smooth transition to high flow, low temperature production. The SV10201 incorporates our most advanced valving technology capable of four levels of water flow, thus allowing the SV10201 to perform optimally in the widest range of temperatures through valving of the (8) water nozzles.</p>
 SV6400		<ul style="list-style-type: none"> • Wide Trail • Narrow Trail • Steep Trail • Base Area 	<p>With a broad deposition pattern the SV6400 is ideal for mid-width trails and open areas. Capable of operating at water pressures of 200 psi and higher it can be used on any part of your mountain. The ability to valve the back two nozzles individually gives you the flexibility to maximize the operation of the SV6400 at a variety of temperatures without shutting down to change nozzles.</p>
 SX6400		<ul style="list-style-type: none"> • Wide Trail • Narrow Trail • Steep Trail • Terrain Park • Base Area • Real Estate Access • On-Board Compressor 	<p>The SX6400 is specifically designed to project snow with pinpoint accuracy. Its focused, directional throw makes the SX6400 ideal for narrow slopes, real estate access and Nordic trail applications. The ability to valve the back two nozzles individually gives you the flexibility to maximize the operation of the SX6400 at a variety of temperatures without shutting down to change nozzles.</p>
 SV6201		<ul style="list-style-type: none"> • Wide Trail • Narrow Trail • Steep Trail • Base Area • On-Board Compressor 	<p>The SV6201 is a fixed flow low cost snowmaker with internal nucleation. This product is ideal for secondary terrain. Its broad deposition pattern is ideal for mid-width trails and open areas. Low cost and lightweight, the SV6201 is a very affordable solution for secondary terrain. Operating at water pressures of 200 psi and higher it is available in 10ft and 20ft lengths and can be mounted trailside or placed in the trail using one of the HKD portability accessories.</p>
 SV4400		<ul style="list-style-type: none"> • Wide Trail • Narrow Trail • Steep Trail • Base Area 	<p>The SV4400 is a fixed flow, low cost snowmaker with external nucleation. Low cost, light weight and a broad spray pattern makes the SV4400 is extremely versatile. Operating at water pressures of 200 psi and higher it is available in 10ft, 20ft and 30ft lengths and can be mounted trailside or placed in the trail using one of the HKD portability accessories.</p>
 SX4400		<ul style="list-style-type: none"> • Wide Trail • Narrow Trail • Steep Trail • Terrain Park • Base Area • Real Estate Access • On-Board Compressor 	<p>The SX4400 is specifically designed to project snow with pinpoint accuracy. Its focused, directional throw makes the SX4400 ideal for narrow slopes, real estate access and Nordic trail applications. Essentially, the SX4400 incorporates all of the advantages of the SV4400 with a very controlled deposition area.</p>

S SERIES

The S Series raises the bar for air/water snowmaking technology. The multi-chambered, completely modular Tower can utilize our Patented double valve base configuration or the rugged fixed flow base block with any of efficient snowgun nozzle designs. S Series Towers can be mounted on the S Fixed Bracket at the side of a trail or sled mounted to patrol a variety snowmaking locations. The modular design of the S Series allows for technology upgrades and streamlines general maintenance and repair work. Enjoy the peace of mind that your snowmaking investment with HKD Snowmakers can evolve to meet the ever-changing needs of your resort.
